

# Database

EBH-stödet is a national database that includes information about potentially and confirmed contaminated sites in Sweden. It is also a technical tool for visualization.

*A database with potentially contaminated sites in Sweden*

## The Database information...

- is designed as an **administrative** support for authorities working with contaminated sites
- is **organized** information possible to search and change in the context of remediation
- is linked to a **web map** that can be viewed both publicly and internally
- views **contamination** in different media such as soil, building, water bodies or sediments
- is also a **result of supervision** by the municipalities and county administrative boards
- is possible for public and other stakeholders to **request**

## Activities in INSURE has been...

- to **develop a new database** in Latvia by the Latvian Environment, Geology and Meteorology Centre (LEGMC)
- to **educate and guide** with internal and external material, trainings sessions and work meetings (LEGMC and CAB Östergötland)
- to **improve**, update and develop sites in the database with data from remediation project such as pilot areas (LEGMC and CAB Östergötland)

The database in Sweden is managed by County Administration Boards (CAB) & Swedish Environmental Protection Agency
